

DECISIONS • DOAJ • PARTNERSHIPS

From Proposals to Action

Vote on the first meetup's proposals, agree the DOAJ route, and open the next proposal cycle.

Second editors' online meetup • Saturday 1 August 2026 • 9:00–9:30 pm Beijing (UTC+8) • ISSN 2979-8639 (Online)

This is the pre-read and working paper for a **30-minute decision meeting**. The first meetup generated proposals; this meetup votes on them. A passed proposal gives its proposer a clear mandate to carry it out within the boundaries printed here. We will then review the real DOAJ path, introduce a possible partnership with an established journal, and hear new proposals for a vote at the third meetup. **Current publication status: five papers are fully published; none of the five is awaiting review.** Facts and links were rechecked on 1 August 2026.

Agenda (30 minutes, hard stop)

Time	Item and intended output
0–2 min	Confirm the voting rule, quorum and authority created by a pass (§1).
2–13 min	Call seven votes on proposals from the first meetup; record owner and first deliverable (§2).
13–21 min	Walk through DOAJ eligibility, the corrected blockers and the fast/safe timeline (§3).
21–26 min	Introduce the AIDER–JGPPS collaboration proposal for the <i>next</i> vote (§4).
26–29 min	Hear other new proposals; capture each in the standard format for the third meetup (§5).
29–30 min	Read back passed motions, owners, deadlines and the next-meeting docket.

1 How Decisions Work

Decision rule requested for this meeting. Let N be the number of eligible editors participating in a vote and A the number voting **against**. The motion **passes when** $A \leq N/2$; it fails only when **more than half** vote against. Abstentions are not votes against, so a tie passes. A recused editor is removed from N for that motion.

For every motion, the chair reads the exact wording below; the proposer has 20 seconds to clarify it; questions are limited to 30 seconds; then each participating editor votes **for**, **against**, or **abstain**. The public minutes record N , all three totals, the result, owner, deadline and evidence link.

Authority after a pass. The named proposer becomes the owner and may, on AIDER's behalf, make the website/GitHub changes, contact people and organise the work expressly described in the motion. A pass does *not* authorise contracts, expenditure, fees, sharing private data, promising publication or authorship, changing the journal's legal/publisher identity, or committing another organisation. Any such step returns for a separate vote.

Proposal cycle. Proposals are normally introduced at one meetup and voted at the next. This gives everyone the same text and time to assess consequences. Today's V1–V7 motions come from the 13 June discussion record. [1] New proposals introduced today, including P8 in §4, enter the third-meetup ballot.

2 Today's Ballot: Proposals from the First Meetup

Each motion is written as an executable mandate. The right-hand column prevents a pass being interpreted more broadly than intended.

ID	Motion to be voted	Proposer owner	/	Boundary and first evidence
V1	Create a two-tier research incubator. Welcome early work in a clearly labelled, non-journal incubator; only work that completes AIDER's full quality process enters the published journal record.	Jianou Jiang		Incubator items are not AIDER articles and carry no promise of later acceptance. Publish the distinction on the site.
V2	Test an institution-paid support model. Develop a concrete option in which independent authors remain free while funded institutions make a modest contribution, and compare it with voluntary institutional sponsorship.	Raul aensen	Adri-	Deliver a feasibility/options note; no APC, submission fee or sponsorship scheme starts without a later policy vote.
V3	Build university and funder relationships. Approach supervisors, professors and institutional contacts to recruit external research, postgraduate work and infrastructure support.	Jianou Jiang		No funding, publication or authorship promise. Log contacts and outcomes for the board.
V4	Build reviewer community through personal outreach. Run regular small meetings, invite senior researchers and recognise strong reviewers; avoid mass or spam-style solicitation.	Raul aensen	Adri-	Produce an invite list and a format for the next open session; respect consent and conflicts of interest.
V5	Reduce submission and reproducibility friction. Audit the full author journey, fix GitHub workflow defects, and simplify documentation without weakening scientific or reproducibility requirements.	Jingda Wu		Open a tracked issue/PR with a before/after test; changes remain reviewable and reversible.
V6	Invite reproducible extensions of senior researchers' back-catalogues. Work with established professors and their students; offer workshops that turn valuable unpublished or follow-on work into reproducible new submissions.	Feng Wei		No duplicate publication. Every submission must contain a genuinely new contribution and receive normal independent review.
V7	Adopt a quality-first publication gate. Before any new research article is published, require successful reproducibility checks and reports from at least two independent, qualified human reviewers, followed by a conflict-free editor's decision.	Raul aensen	Adri-	AI tools may support integrity checks but do not replace the two human reports. Publish the workflow and reviewer criteria.

3 DOAJ: Requirements, Reality and Timeline

The Directory of Open Access Journals is free to apply to. AIDER now has several foundations DOAJ expects: an online ISSN, immediate CC BY open access, **five fully published research articles**, a dedicated website, a named editorial board and public author guidance. No current paper is being counted merely because it is under review. But an ISSN plus five published papers is **not** enough. The current DOAJ Guide to Applying (v2.9) creates three binding gaps. [2]

3.1 The three gates that control our application date

Requirement	Status	What it means for AIDER
Publishing history > 1 year or ≥ 10 OA research articles; at least 5 per year	PARTIAL	First publication was March 2026 and all five completed articles are published and live. Five more clear the article-count gate, but do not solve the next two gates.
At least two independent reviewers for every article; peer reviewers should be outside the journal's editorial team	BLOCKER	Public issue records show the five papers received one or two human reports, but those reviewers were AIDER board members. Automated/AI reports are explicitly labelled "not peer review." The process must change before the next article. [2,3,4]
Editor/board/reviewer-authored papers ≤ 25% (latest two issues, or last calendar year for continuous publication)	BLOCKER	All five current papers have at least one AIDER editor/board author: 5/5 = 100% . Reaching ten with five external papers would still be 50%. If assessed across 2026, five internal papers require at least 20 total papers —15 additional eligible external-author papers—to reach 25%. [2]

The main correction to the earlier briefing. A human editor who reads AI-generated reports is not a substitute for DOAJ's two independent reviewers. DOAJ currently treats its detailed AI section as best practice rather than a basic criterion, but it says reviewers and editors should not use generative AI to create assessments. The defensible AIDER model is: **automated reproducibility and integrity checks + two external human reports + a human editorial decision.** [2,4]

3.2 Website and operating work that can start immediately

Before applying, AIDER must make the following easy to reach from the homepage: open-access policy; aims and scope; board names and affiliations; author instructions; exact editorial/peer-review process; licensing and copyright terms; an explicit statement that all author charges are zero; and publisher name, address, contact person and dedicated journal email. Licensing should appear in every article. A plagiarism/similarity process, archiving, repository policy, persistent identifiers and metadata deposits strengthen the application even where DOAJ labels them recommendations rather than basic criteria. [2]

Publish an AI-use policy that separates permitted automated checks from confidential human assessment. Recruit a real external reviewer pool before accepting more papers. For board-authored submissions, use a handling editor and reviewers with no conflict. Do not try to cure endogeneity by creating artificial issues or by lowering quality to hit a number.

3.3 A credible application timeline

When	Milestone	Go/no-go evidence	evidence
1–31 Aug 2026	Publish the missing policies; implement the two-external-reviewer workflow; build a reviewer register; ask DOAJ in writing how it will treat the five legacy papers and AIDER's continuous/issue structure.	Policies live; test submission; DOAJ reply logged.	
Sep–Dec 2026	Publish only under the new process and prioritise genuinely external authors. The numerical 2026 endogeneity fast path is 15 additional non-board/non-reviewer-authored papers, but quality must not be sacrificed to reach it.	Two reports/article; author mix ledger; $\leq 25\%$ endogeneity.	
When article 10 is live	The 10-article history gate is cleared. Do not apply automatically: peer review, endogeneity and all website disclosures must also pass.	Full pre-application audit.	
After Mar 2027	The more-than-one-year history route becomes available. Apply only if DOAJ confirms the review record and assessed endogeneity period are acceptable.	Written clarification + board sign-off.	
Early 2028 fall-back	If 2026 cannot be made compliant, build a clean 2027 record (≥ 5 articles, $\leq 25\%$ endogeneity, two independent reviews each), then apply.	Clean calendar-year ledger.	
After submission	DOAJ says most applications are processed in about 3 months and decisions are generally reached within 6 months. Answer queries promptly; a non-response for one month can cause rejection. [2,5]	Expected decision: 3–6 months.	

Immediate DOAJ decision. The next high-value action is not “submit the form.” It is to make every *new* paper unquestionably compliant, obtain DOAJ's written view on the five legacy papers, and recruit external authors and reviewers. Ten articles solves only one of three gates.

4 New Proposal for the Third Meetup: Collaborate with JGPPS

The journal remembered from the supervisor discussion is most likely the **Journal of the Global Power and Propulsion Society (JGPPS)**. Prof. Budimir Rosic is listed on its editorial board. JGPPS began publishing open access in 2017, entered DOAJ in August 2018, is preserved in Portico, and reports Web of Science/ESCI coverage for articles from 2020 and Scopus coverage from 2021. [6,7,8]

This makes JGPPS a strong potential mentor and collaborator in AIDER's overlapping area of AI, energy, turbomachinery and propulsion. It does **not** create an indexing shortcut: DOAJ and Clarivate evaluate AIDER itself. JGPPS cannot transfer its DOAJ, Scopus or Web of Science status to AIDER, and the same paper cannot be presented as independently published in both journals. Clarivate applies 24 journal-level quality criteria before entry to ESCI. [9]

P8 — motion to circulate now and vote at the third meetup

Proposer/owner: Jianou Jiang. Authorise Jianou to ask Prof. Rosic for a warm introduction to the JGPPS Editor-in-Chief or journal administrator and hold one non-binding exploratory conversation. Explore: DOAJ/WoS mentorship; peer-review and metadata workflow lessons; a jointly hosted reproducibility workshop; reciprocal, conflict-managed reviewer referrals; and a possible collaboration in the journals' overlapping scope. Jianou will return with written options, benefits, obligations, costs and conflicts before any commitment is made.

Questions the exploratory meeting must answer:

- Is JGPPS willing to mentor a new diamond-OA journal on policies, external peer review, Crossref

metadata and Portico-style preservation?

- Would a co-hosted AI-for-energy reproducibility workshop benefit both communities without confusing the two publication records?
- Can reviewers or authors be referred under explicit consent and conflict-of-interest rules?
- If a special issue or co-publication is suggested, which journal is the publisher of record, where is it indexed, what fees apply, and who owns the metadata and editorial decision?
- What evidence from JGPPS's 2017–2020 path was decisive for DOAJ, Scopus and ESCI?

Recommended scope: begin with mentorship and one joint workshop, not a merger, journal transfer or promise of shared indexing.

5 New Proposals Heard Today

Each proposer has up to 45 seconds. To enter the third-meetup ballot, record one sentence for each field: **problem; proposed action; owner; authority/boundaries; first deliverable and date; success measure**. Circulate the exact motion within 48 hours; no execution mandate exists until it passes at the next vote.

ID	Proposer / owner	One-sentence motion	Deliverable / measure
P8	Jianou Jiang	Explore an AIDER–JGPPS collaboration as specified in §4.	Written options after one exploratory meeting.
P9			
P10			
P11			

What Must Be True at 9:30 pm

1. V1–V7 each have a recorded result; every passed motion has an owner and first deadline.
2. Everyone understands that DOAJ's binding gaps are independent external peer review, endogeny, and the publication-history gate—not merely the ISSN or five-paper count.
3. P8 and every other new proposal are written clearly enough to circulate and vote at the third meetup.
4. The public meeting record is updated within 48 hours with the vote totals and action tracker.
